Acknowledgement

The Researchers would like to express their deepest gratitude to the following individuals who, in one way or another, have contributed to the completion of this research paper.

To DR. Arnold M, Fuentes, Ph. D., MPA, MMIT, Assistant Dean of the College of Information Technology, for Granting us the opportunity to conduct this research.

To our Teachers and Advisers that help us and guide us since our first day of college. A special thanks to Sir Ryan Valeriano and Sir Yves for their support and kindness and for dedication and efforts have been instrumental in making this capstone experience possible.

To the panel members, for their invaluable support and guidance, advice support during oral examinations.

To our families and friends for their continuous encouragement throughout this study.

Above all, we express our gratitude to all the teachers that help us through this capstone project. Thank you for all your support. May god bless you all.

Abstract

The Help Pinoy online donation platform is an online donation platform that enables donors to help various charitable causes primarily disastrous events. The system exists to create a user-friendly interface which allows donors to donate without worries. The system provides donors with a quick method to connect with the people that were affected by calamities.

The donation platform acts as an administrative system for the Liga ng mga Barangay to handle online donors who want to help people using Gcash or other online payment methods. The system decreases human labor because you don't need to go to people and ask help face to face because they can donate online.

The system also handles donor requests, update campaign goals, and maintain correct financial information which enables the Liga ng mga Barangay to deliver better transparency and accountability to their donors which enables donors to contribute online. This leads to improved satisfaction and operational performance through its combined features.

Chapter 1

Introduction of the Study

Donation platform is a Platform where you can donate in people that in need in times of disaster whether it is physical donation where you can go to relief centers donate to people in needs but sometimes physical donation can be a hustle because they don't have a guide where to go and hesitant because they think that their donations are not going to people in need especially if your a busy man or woman and for online donations some people don't or afraid to donate because of online breaches or personal information leakage so we make a robust and reliable donation platform where you don't need to worry about this problems so make Help Pinoy a donation platform where not only help people that affected by disasters but also help its users to have a safe and reliable donation platform where you don't need to worry about where you going if you are donating physically and not worry about data leakage when you donating online.The Platform will provide up-to-date information making sure donors can know where to send help and real time news update to update the donors where their donation goes. Will make sure that the donation platform will execute it well and to meet our users,LGU and NGO-Non Governmental Organization expectations so we can make this platform safe and reliable.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Technical Background of the Study

The Focus of the Study is to assist the Liga ng mga Barangay ,Guimbal to help them make a donation platform that will help People that in needs in times of disaster by making Help Pinoy a donation platform,Help Pinoy will not only help people that struck by calamities but also to make a donation platform that has a robust and reliable security in order to protect the personal information users to not get leaked and to make sure our donors personal information safe.

This list is the features that you can find on our Donation Platform:

- 1. Multi Factor Authentication(MFA)** - In order to make our donors Personal information safe we will add Multi Factor Authentication(MFA) it will add an extra layer of security to make sure the personal information of donors will not get leaked.by requiring multiple forms of identification like passwords and smartphone authentication code.

- 2. Geolocation and Mapping Tools** - Geolocation and mapping tools are the feature that the donation platform has that will help the donors locate where is the nearest relief centers to donate when they want to donate physically and when they want to donate online they can use the interactive maps to know where there money going and how it's helping specific disaster-affected areas.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

3. **Social Media Integration**-We will promote our Donation platforms in Social Media Sites like Facebook, Twitter and Instagram to allow us to know about our donation platform. This will help us reach more audiences to donate on our platforms which can help more donors to come.
4. **Payment Gateways and Online Transaction System**-You can donate on our Donation Platform through G-cash, Paymaya, and also you can donate through Bank transfer. This kind of payment will help you to donate easily without hassle. This trusted online payment gateways will make sure that donor information is securely processed allowing donors to donate safely without worrying of exposing their personal data.

Statement of the Problem

Disaster is an inevitable event Because every year philippines are hit by several tropical cyclones and on top of that Philippines is also in pacific ring of fire and it make us vulnerable to earthquakes, this disaster is unavoidable but addressing this problems is always a big problem for the Liga ng mga Brangay in Guimbal especially when the people hit by this disaster are helpless because of lack of budgeting in terms of donation to people affected by disaster that's why we make Help Pinoy a donation platform we made this donation platform to help the LGU-Local Government Unit and NGO-Non Governmental Organization Gather Donations For the people that affected by disaster.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Liga ng mga Barangay,Guimbal faces the following Problem:

1. **Lack of Trust and Transparency**-Some donors are hesitant to donate because of trust issues of whether their money is being used to give to people in need or not.
2. **Unknown Donation Platforms**-Some LGU and NGO Donation platforms are not well advertised or not known by people because of this it can lead to small amounts of people donating on online funds and relief centers.
3. **Old Fashioned Technologies**-Technological advancement is one of the problems of LGU and NGOs Donation Platform Some of their Donation Platform are not even user friendly and hard to navigate, and it doesn't have features that allow donors to track their contributions in real-time, which can discourage giving.

This project seeks to address all this problem by developing an online donation platform that will assist all this problem by using modern technologies such as Multi Factor authentication (MFA),Social Integrations,using Mapping Tools. By this approach we can avoid this kind of problem in order to make a lot of donors on our platform so we can help the people that are affected by disaster.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY
Significance of the study

This Study aims to help people that are affected by disaster and people that are using donation platforms by providing a Donation platform that is safe and reliable to use and the findings of this web platform will benefit Liga ng mga Brangay, Guimbal. And the features of this web platform are real time news updates that announce and announcements that are related to disaster relief efforts. We update the donors so they can stay informed by adding a real news update and a map feature that helps users to locate the donation center if they want to donate personally and also user friendly because of minimal steps to complete a donation. Furthermore this Study will help a lot of people who want to donate by making this Donation Platform safe and reliable.

- 1. Improved User experience**-We made a donation platform where the users can easily understand it because of minimalist design, easy navigation and easy instructions to follow.
- 2. Improved Security Measures**-By adding Multi factor Authentication it will improve the security of the donation platform so that the data of donors can be leaked to avoid hacking.
- 3. Hustle Free Donating**-Because you can donate through G-cash so you don't need to go to relief centers in order to help those people in need.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

- 4. Helping Donors to navigate-**by adding mapping tools that could help people who want to donate to relief centers personally.

Scope and Limitations

This research focuses on the design and development of an online donation to improve the efficiency of donating to people that are

affected by calamities or disaster to improve the donations and make it simple and reliable. The key features of the system it includes real time news update, map feature and User friendly and applying multi factor authentication (MFA)

The study will cover the design and implementation of the platform includes:

- 1. Real Time News Update-**Using Push Notifications we can update our donors to where there money goes and if there money goes to the people in need
- 2. User Friendly Platforms-**By Making an easy to navigate and minimal instructions Donation Platform that will help its donors to donate easily without worrying about extra steps.
- 3. Online Transactions-**If you want to donate without going to relief centers we add online transaction so you can help people without even going to donation centers

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

- 4. Mapping Tools**-Mapping tools is big help for people who want to donate personally so it can help donors find the nearest donation center.

The Platform will be to help the Liga ng mga Brangay, Guimbal and people that are affected by calamities and disaster. The scope includes the testing of the platform in the real-world environment.

Limitations of The Study

While the study aims to address the aspect of donation platform there are some limitations

- 1. Dependence on the Internet**-Because Donating on our donation platform requires Internet connection and in times of disaster some donors can't donate because of Internet interruption in certain areas
- 2. Time Constraints**-Because of limited time we can make reliable Donation platform but also because of limited time we can't capture long term challenges
- 3. A lot Of Competition**-Because there's a lot of donation platforms out there where they are well known and have well known advertisers where they don't need to worry about their donation platforms.

Definition of Terms

- 1. Digital Service**-A digital service refers to any service that is delivered through digital channels, often via the internet or software applications.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

2. **Online Donation Platform**-An online donation platform is a digital service that allows individuals or organizations to make monetary contributions to a cause, charity, project, or organization via the internet.
3. **Multi Factor Authentication (MFA)**-Multi-Factor Authentication (MFA), a security process that requires users to provide two or more verification factors to gain access to an account, application, or system.
4. **Mapping Tools**-Mapping tools are software applications or platforms that allow users to create, view, analyze, and interact with maps. These tools are used for a variety of purposes, from simple navigation and geographic visualization to complex spatial analysis and geographic information.
5. **Social Media Integration**-Social Media Integration refers to the process of connecting a website, application, or platform with social media networks (such as Facebook, Twitter, Instagram, LinkedIn, etc.) in a way that enables users to easily share content, engage with posts, or use social media data and features directly within the platform.
6. **Cyber Security Threats**- A cyber threat or cybersecurity threat is defined as a malicious act intended to steal or damage data or disrupt the digital wellbeing and stability of a company.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

7. **Target Audiences**-Target audiences refer to specific groups of people that a business, brand, or organization aims to reach with its products, services, or marketing efforts
8. **Transparency**-Transparency refers to the practice of being open, clear, and honest about operations, decisions, processes, and communication. It involves providing stakeholders (such as customers, employees, partners, or the public) with clear and accessible information, especially regarding how decisions are made, how resources are allocated, and how the organization functions
9. **User Friendly**- User-friendly refers to the ease with which a person can interact with a product, service, or system. In the context of technology, it particularly refers to how intuitive, simple, and efficient the user experience (UX) is, ensuring that users can achieve their goals with minimal effort, confusion, or frustration.
10. **Payment gateways**-technologies that enable online payments between Donors and organizations.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Chapter 2

Research Related Literature

Overview of Donation Platform

A donation platform is an online system that facilitates financial contributions from donors to individuals, organizations, or charitable causes. These platforms provide a secure and convenient way for people to donate money, track fundraising progress, and engage with various social causes. They are commonly used by non-profit organizations, crowdfunding campaigns, religious institutions, and social impact projects. And the purpose of these Donations is commonly for helping people that are in need.

Traditional vs Modern Donation Platform

Traditional donation platforms rely on cash, checks, and direct bank transfers, limiting accessibility to physical locations such as events or offices, with slow manual processing and minimal transparency. In contrast, modern donation platforms utilize online payments, including credit/debit cards, PayPal, and mobile wallets, allowing global accessibility and instant transactions. Traditional methods often involve higher costs due to paperwork and logistics, whereas modern platforms reduce expenses through automation and digital receipts. Security risks

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

such as theft and fraud are more prevalent in traditional systems, while modern platforms employ encryption, fraud detection, and blockchain for enhanced security and transparency. Engagement in traditional methods is typically one-time, lacking direct donor feedback,

whereas modern platforms foster continuous interaction through updates, social media integration, and gamification. Recurring donations in traditional systems require manual setup, while modern platforms offer automated recurring options. Fundraising reach is limited in traditional models, whereas digital platforms enable global contributions and AI-driven personalized donor recommendations. Ultimately, modern donation platforms provide greater efficiency, trust, and accessibility compared to traditional methods, revolutionizing the way people contribute to charitable causes.

Technologies in Donation Platform

Modern donation platforms utilize various technologies to enhance security, efficiency, and donor engagement. These technologies streamline the donation process, improve transparency, and expand the reach of fundraising efforts.

- **Multi Factor Authentication** - A security mechanism that requires users to verify their identity using two or more authentication factors before accessing an account or completing a transaction.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

- **Mapping Tools** - Mapping tools are used in donation platforms to visualize donation impact, track fundraising progress, and enhance donor engagement.
- **Social Media Integration** - Social media integration is using social media to promote our donation platform to gather more donors.
- **Payment Gateways** - A payment gateway is a technology that enables secure online transactions by processing payments from donors to organizations or individuals.

Technologies In Multi Factor Authentication (MFA) Titled
Authentication from Passwords to Public Keys

According to **Smith, Richard E.(2002)** Even before computers came along, people used a variety of distinguishing characteristics to authenticate one another. Computer systems have applied these characteristics whenever people have found a cost effective way to implement them digitally.

Although technically savvy attackers might go after a password file, other attackers might take a simpler approach: they exploit human nature to try to guess what passwords people use. That's why we need to use Multi Factor Authentication(MFA) in order to avoid this kind of problem

Smith, Richard E.(2002).Authentication from Passwords to Public Keys, ISBN 2001046001, 2001046001

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Technologies on the Mapping Tools Book Titled Mastering ArcGIS

According to **Maribeth Hughett Price (2014)** Instead of relying on proprietary, specialized software, more GIS functions are now implemented within open-source software and hardware. GIS data are now more often stored using engines from commercial database

platforms and utilize the same development environment as the rest of the computer industry.

In order for us to improve, Help Pinoy Studying ArcGIS can help us improve our mapping tools that will help the donors track nearest donation centers if they want to donate personally.

Maribeth Hughett Price (2014), *Mastering ArcGIS*, Publisher McGraw Hill, ISBN 9780077826260, 2012050354

Social Media Integration and Strategies

According to **Mansfield, Heather (2014)** Your Donors want to know if their financial support is having an impact helping you accomplish your mission if your non-profit reaches a program milestone, then write an article or blogpost that chronicles about your success and include videos and infographics that showcase the communities or causes served.

Also **Mansfield, Heater (2014)** says that Donors and supporters often want to share your content with their social networks Therefore every page of your website and all blog posts should be shareable

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

These strategies are very effective and useful especially to our donation platform because we want to gather a lot of donors when we release our Donation Platform.

Mansfield, Heater (2014) *Mobile for Good: A How-To Fundraising Guide for Nonprofits*, McGraw Hill Education, ISBN 9780071825467, 2013041725

Case Study

According to **Maribeth Hughett Price (2014)** *Mastering ArcGIS* Geographic Information Systems are put to many uses, but

Providing the means to collect, manage, and analyze data to produce information for better decision making is the common goal and the strength of GIS. Using this book, you can learn what a GIS is, what it does and how to apply its capabilities to solve real world problems.

The goal of Enterprise GIS is to meet the data needs of many different levels of users and to provide access to non-traditional users of GIS. The Enterprise GIS is the culmination of the other trends and capabilities. The costs and challenges in developing and maintaining an enterprise GIS are significant. but the rewards and cost saving is also substantial.

To Help Pinoy, this case study helped us to understand that ArcGIS could Help us expand our capabilities in geolocation and the author of the book also said that the costs and challenges in developing GIS are significant but the rewards and cost saving is also substantial. In order for us to make a significant impact we need to face the challenges in developing GIS.

Maribeth Hughett Price (2014), *Mastering ArcGIS*, Publisher McGraw Hill, ISBN 9780077826260, 2012050354

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY
Conceptual Framework of Help Pinoy

System

Provides an interactive platform for users and admins
Ensures data privacy, security, and accuracy
Offers user-friendly interfaces for donors, recipients, and administrators

Inputs

User Registration and Login (Donors, Admins)
Location Access Permission (to find nearby donation centers)
Donation Center Information (addresses, contact details, operating hours)

Disaster News Articles (uploaded and managed by admins)
Online Donation Data (transaction details, donor info, donation amounts)

Provide Service

Nearby Donation Center Locator (for donors)
Real-Time Disaster News Updates
Online Donation System
Admin Dashboard (Tracks and monitors donation, news)

Outputs

Verified and accessible donation centers (for donors)
Timely and accurate disaster news available in real-time
Efficient online donation process (for donors)
Transparent donation tracking (for admins)
Up-to-date news articles managed (for admins)

Outcomes

Increased donations and better accessibility (for donors)
Faster relief support (locate nearby centers)
Informed communities (Realtime Disaster news)
Efficient management of donations and news articles by admins
Improved trust and transparency between donors and recipient organizations

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Chapter 3
Methodologies

This outlines the research methodology that will be used in the development of the "Help Pinoy an Online donation platform" the goal of this research is to make an online donation platform that will combine modern technologies such as mapping tools, multi factor authentication This chapter will detail the research approach tools and techniques to achieve this objective of making a safe and reliable online donation platform. We will demonstrate the procedures we will use to collect the data and create an online platform for donations and in this way we'll understand the point of view of the people who want to donate. Once the system is finished we will test it to make sure that the website is safe and reliable. We will make sure that the research is clear and understandable to make sure that the project will be executed well.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY
Research Design

A mixed approach shall be followed in this stage in order to create the "Help Pinoy Online Donation Platform" we will gather information using a descriptive and statistical approach to collect feedback from the user of our donation platform and (LGU) Disaster Relief Organization.

The response of our surveys will be crucial to us in order to deploy it. The feedback of the users and (LGU) Relief organization will identify what we need to improve and we need to add on our online donation platform.

This research will offer insightful information about what makes an online donation experience successful as well as suggestions for enhancing platform architecture and trust-building techniques. In order to maximize the online donation process for both donors and charitable organizations, the study concentrates on both organizational effectiveness and user experiences.

Software Development Life Cycle (SDLC)

The Software Development Life Cycle (SDLC) is the structured approach that will guide the development of Help Pinoy. To Develop a project that is safe and reliable. This will assure that the system will be developed by LGU and NGO needs and satisfaction and with recommendations of our users on our

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

surveys to make the donation platform meet the needs of our user and align the provided by respondent

The SDLC consists of the following stages:

1.Planning and Requirements Analysis

The planning stage for developing a donation platform for an LGU begins with the analysis of the community's needs and input from

local organizations, after which objectives are defined and a roadmap is established to ensure the platform effectively supports public donations while adhering to local government policies and regulations. and we will collect the data we gathered on our users' feedback and (LGU) disaster relief organization. This will enable us to understand more about the needs and preferences of the users.

2.System Design

In the system design stage of developing a donation platform for a Local Government Unit (LGU), the architecture is created to ensure scalability, security, and ease of use in order to achieve this we add some features to our platform like mapping tools and multifactor authentication to ensure the system will be safe and functional.

3.Development

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

In the development stage of a donation platform for a Local Government Unit (LGU), the coding process begins with the implementation of the user interface for donors and administrators, the back-end functionality for processing donations, setting up databases to manage donor information, and ensuring compliance with local government policies, all while focusing on security, performance, and ease of use. In this stage the feedback of our users will provide us with a wide perspective about how we can improve the platform features like security and accessibility. This approach will help the platform do what users need and expect.

4. Testing

Once the system is finished we will make sure to test it first, we will conduct massive testing to secure smooth user experience, and reliable functionality for donors and to ensure the platform can handle large numbers of users we will conduct a test in real-world to ensure the platform doesn't have any problem before its deployment.

5. Deployment

After several testing of the system we will deploy it. The donation platform was successfully deployed to the production environment. The deployment included configuring necessary infrastructure, optimizing the platform for high traffic, allowing donors to make real-time donations without any disruptions. and we will also monitor the potential issues of the platform to ensure smooth user experience as donations begin flowing in.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

6.Maintenance and Support

After several testing of the system we will deploy it. The donation platform was successfully deployed to the production environment The deployment included configuring necessary infrastructure, optimizing the platform for high traffic, allowing donors to make real-time donations without any disruptions. and we will also monitor the potential issues of the platform to ensure smooth user experience as donations begin flowing in.

Data Collection Techniques

In order to improve our Platform we will conduct data collection techniques that will help us to our platform we will conduct surveys to our potential donors these techniques will help our platform meet the needs of our donors or potential donors. The following data collection will be used.

1.Surveys

Surveys will be used as a primary method of collecting data. These surveys will focus on the challenges donors of donation platform faces the questions shall be designed in a way to gather insights on their experience in this way, it becomes possible for us to make a better donation platform.

2.Interviews

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Interviews will be conducted with our potential and current donors to collect qualitative data. Our respondents will be our current and potential donors the interview that we doing we will compare the challenges of our current and potential donors in this way we can add additional features that they preferred in order to meet the user expectations in this interview we will conduct it through google forms in this way we can compare the current and potential donors problems.

3.Focus Group

A focus group was conducted to gather valuable feedback from donors and LGU disaster relief, helping to refine the donation platform's user interface, streamline the donation process, and

ensure a seamless experience for all users.in this discussion the interaction between participants will enable us to make insights of their point of view of the platform so we can discover features that could make the user experience better.

4.Observations

Through careful observation of user interactions on the donation platform, the research team was able to identify several key areas where users faced difficulties with navigation on the donation page. The team recorded how users were interacting with different features and tracked user behavior at various steps of the donation process. This brought forward valuable insights that pointed to specific friction points. This will help in improving the user interface, simplifying the steps, and generally enhancing the donation experience to increase conversion rates and donor satisfaction.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

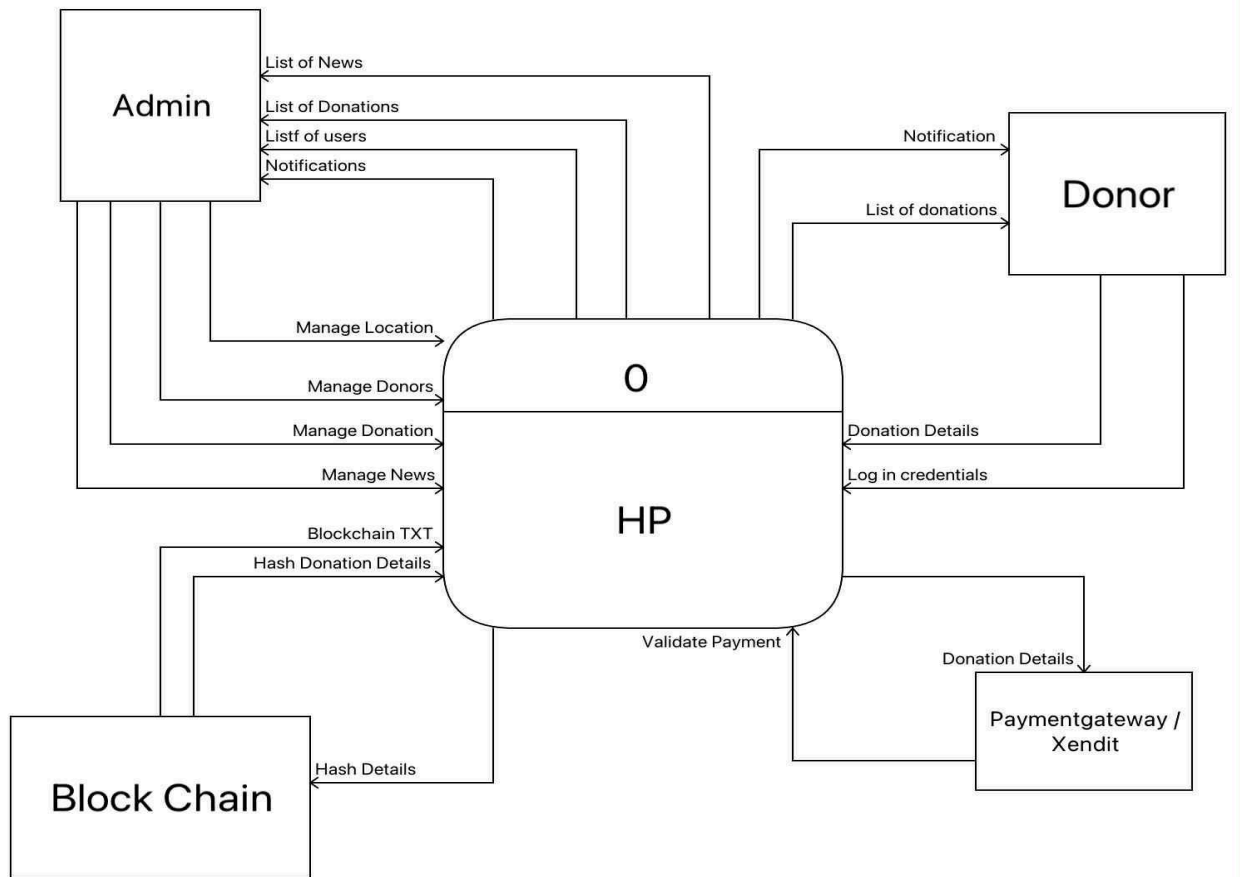

5.Document Analysis

to widen the platform system design, existing documents and reports on donation platforms will be analyzed. This will enable us to learn how people are using the site, which features are most frequently used, and where users might be having issues. Document analysis will help identify the trends and technological advancements that could be used to "Help Pinoy Online Donation platform."

Data Flow Diagram

This Data Flow Diagram (DFD) illustrates the flow of information within a donation management system involving four external entities: Admin, Donor, Blockchain, and Payment Gateway (Xendit). The central process, labeled "HP," handles user authentication, donation processing, blockchain hashing, and payment validation, while facilitating data exchanges such as managing donations, locations, and users. Admins manage system data and retrieve reports, donors submit donations and receive notifications, blockchain secures donation data via hashes, and the payment gateway validates financial transactions.

DrawExpress

Entity Relationship Diagram

This Entity Relationship Diagram (ERD) represents the structure of a donation management system, detailing the relationships among entities such as Admin, Donors, Donation, Location, and News. Each entity includes key attributes (name, email, donation_id, location, name) and is connected through relationships like *Manages*, *Donate*, *View*, and *Post*, with cardinalities clearly defined. The diagram illustrates how Admins oversee multiple components, Donors contribute to

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

donations and interact with content, and data is organized for efficient tracking and management across the system.

Powered by
DrawExpress

Chapter 4

Result and Discussion

Results

The donation platform demonstrated effective performance in raising funds for disaster relief efforts. Most donations were made shortly after campaigns were launched, showing strong initial donor response. A significant portion of users accessed the platform via mobile devices, and many donations came through

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

social media sharing. Donor retention was moderate, with a mix of new and returning contributors.

Discussions

These findings suggest that the platform is effective at mobilizing quick support during emergencies. However, there is room to improve long-term donor engagement and mobile user experience. Enhancing features such as mobile responsiveness, post-donation communication, and social sharing tools could help boost fundraising results and encourage donor loyalty. Overall, the platform is performing well but can be further optimized to better support disaster relief fundraising.

System features

Help Pinoy is designed to prioritize both security and accessibility so we add Multi-Factor Authentication (MFA) on our system features to ensure that donor information is protected by requiring multiple verification steps before access is granted and Fernet cryptography is also implemented to provide strong symmetric encryption, ensuring that sensitive donor data such as personal details and transaction records is securely encrypted and cannot be read or altered without the proper key. Geolocation and mapping tools allow donors to locate the nearest relief

centers for physical donations and track how their online contributions are used in disaster-affected areas. Social media integration with platforms such as Facebook, Twitter, and Instagram expands our outreach, making it easier to promote donation campaigns and attract more supporters. Additionally, the platform supports various trusted payment methods like GCash, PayMaya, and bank transfers, enabling donors to contribute conveniently and securely.

Implementation Challenges

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

One of the key implementation challenges that we face on creating Help Pinoy is ensuring the seamless integration of secure payment gateways, user authentication systems, and real-time data tracking while maintaining high performance and protecting sensitive donor information from potential cyber threats. Implementing technologies like Multi-Factor Authentication and Fernet cryptography requires careful planning to avoid user inconvenience while ensuring strong data security. Additionally, integrating geolocation and mapping tools demands accurate data and constant updates, which can be resource-intensive. Ensuring compatibility across various devices and platforms also poses a challenge, especially in reaching donors in remote areas with limited internet access. Finally, promoting the platform through social media and building trust among users requires consistent communication, transparency, and ongoing technical support.

Comparison To Other Systems

If we compare our donation platform Help Pinoy into other traditional platforms Help Pinoy is a lot better compared to other traditional donation platforms because Help Pinoy had this Features:

1.Enhanced Security Measures

Traditional donation platforms typically rely on basic authentication methods, such as usernames and passwords, which

are increasingly vulnerable to security breaches. In contrast, the proposed platform incorporates Multi-Factor Authentication (MFA) to add an additional layer of verification, significantly reducing the risk of unauthorized access. Moreover, it integrates Fernet cryptography, a robust symmetric encryption system, to ensure that all sensitive donor information is encrypted and securely stored. This approach addresses the growing need for advanced data protection and regulatory compliance.

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

2. Transparency Through Geolocation and Mapping Tools

Existing systems often lack transparency regarding the utilization of donor funds. Donors may not receive clear or timely updates on where and how their donations are being used. The proposed platform solves this issue by implementing geolocation and interactive mapping tools, enabling users to visualize the exact locations of relief centers and track the impact of their contributions in real time. This feature not only builds trust but also strengthens the accountability of the platform.

3. Broader Outreach via Social Media Integration

Many traditional platforms rely primarily on websites or email campaigns for donor engagement, which can limit visibility and outreach. The proposed donation platform, however, leverages social media integration with platforms such as Facebook, Twitter, and Instagram. This functionality allows the platform to reach a wider audience, promote donation drives more effectively, and engage with users in real time.

4. Flexible and Secure Payment Options

While many older systems offer limited payment methods such as credit cards or direct bank transfers, the proposed platform includes multiple trusted and convenient options like GCash, PayMaya, and traditional bank transfers. This multi-channel approach enhances the user experience by providing donors with familiar, accessible, and secure ways to contribute.

5. Improved Data Privacy Compliance

Some existing platforms do not fully comply with updated data privacy laws or lack proper encryption standards. By integrating Fernet encryption, the proposed system ensures compliance with data protection regulations, reinforcing donor confidence and reducing legal risks associated with data handling.

Chapter V
Conclusion and Recommendations

PHINMA UNIVERSITY OF ILOILO
COLLEGE OF INFORMATION TECHNOLOGY

Help Pinoy is a secure donation platform that protects personal data through advanced security measures like Fernet Cryptography and Multi-Factor Authentication, providing a safe way for donors to help those in need. To improve user experience and accessibility, the platform should enhance mobile responsiveness and implement automated or personalized thank-you messages to boost donor satisfaction. Increasing social media engagement is also recommended to attract more future donors and expand the platform's reach. These improvements will help make Help Pinoy even more effective and trustworthy for both donors and recipients.

Conclusion

In Conclusion Help Pinoy is a secure donation platform that offers the best experience to donate without worrying about your personal data getting leaked through adding various security measures like Fernet Cryptography and (MFA)Multi Factor Authentication for added security. It became clear that Help Pinoy is not only important for the people in need but also important for donors to help them donate securely.

Recommendations

We recommend enhancing the platform by improving mobile responsiveness to ensure accessibility for all users and future donors. We also recommend implementing automated thank-you messages or adding a personal touch and increasing donor satisfaction. And we also want to make more social media engagement to gather more future donors.

Final Thoughts

The development of donation platform Help pinoy represents a significant step to community support through technology by providing Filipinos in need. By combining accessibility,transparency and user trust help pinoy has the
